Yealink W52P/W56P IP DECT Phone Release Notes of Version 25.81.193.10

1. Introduction

Firmware Version:

Base for W52P/W56P: 25.81.193.10 upgrades to 25.81.193.10.

W56H: 61.80.0.15 upgrades to 61.81.0.30.

W52H: 26.73.0.40 upgrades to 26.81.0.30.

Applicable Models: Base for W52P/W56P, W56H, W52H

• Release Date: Sept 25th, 2017.

2. New Features

- 1. Added a new Auto-P (Auto Provisioning) mechanism, including how to upgrade the firmware, how to import and export CFG configuration files, how to backup contacts, etc.
- 2. Added the feature of Multicast Paging.
- 3. Added the feature of Emergency Dialplan.
- 4. Added the feature that you can enable the IP DECT phone to encrypt <MAC>-local.cfg file using the plaintext AES key.
- 5. Added the feature of Manual NAT (Static NAT) and ICE.
- 6. Added the feature that if the server.url is changed, then the phone will do the auto-provisioning automatically.
- 7. Added the feature of Call Park.
- 8. Added the feature of Ringer Device for Headset.
- 9. Added the feature of Number of Registered Handsets.

3. Optimization

- 1. Optimized the feature of Upgrading Firmware.
- 2. Optimized the feature of Redirection and Provisioning Service (RPS).
- 3. Optimized the feature of Network conference.
- 4. Optimized the feature of Audio Codec Configuration.

- 5. Optimized the feature of Time and Date.
- 6. Optimized the Status item in the web user interface.
- 7. Optimized the feature that the last four characters of MAC address will be included as a part of base ID, for example, Base1 FCC5.
- 8. Optimized the feature of Viewing Log Files.
- 9. Optimized the feature of 802.1X Authentication.
- 10. Optimized the feature of Call Waiting.
- 11. Optimized the feature that the LCD screen will be turned off if the handset is in the idle state for 30 minutes.

4. Bug Fixes

5. New Features Descriptions

 Added a new Auto-P (Auto Provisioning) mechanism, including how to upgrade the firmware, how to import and export CFG configuration files, how to backup contacts, etc.

Description:

I. Auto Provisioning Deployment Mechanism

(1) Users can use Boot Files to provision the phones. The boot files are valid BOOT files that can be created or edited using a text editor such as UltraEdit. The boot files are first downloaded when you provision the phones using centralized provisioning (refer to Central Provisioning). You can reference some configuration files in the boot files (including features.cfg and network.cfg) to be acquired by all your phones and specify the download sequence of these configuration files.

Note: If you use Boot Files to provision the phones, the overwrite mode and layer mechanism will be enabled by default.

(2) If there is no any Boot Files, the phone will use the old Auto-P mechanism to download the Y000000000xx.cfg and mac.cfg files as before.

II. Overwrite Mode

The overwrite mode will be applied to the configuration files specified to download. If the value of a parameter in configuration files is deleted or commented out, the factory default value can take effect immediately after auto

provisioning. Overwrite mode doesn't affect the non-static settings configured via web/phone user interface. After auto provisioning, non-static setting of the configuration item in the <MAC>-local CFG file will be written and saved to the IP phone system.

III. Layering Mechanism for Reset

If *static.auto_provision.custom.protect* is set to 1 (Enabled), personalized settings configured via web or phone user interface will be kept after auto provisioning. There are three layers: Local, Auto Provision and Static which includes five ways to reset the phone:

Reset local settings: All configurations saved in the <MAC>-local.cfg configuration file on the IP phone will be reset.

Reset non-static settings: All configurations except the static configurations on the phone will be reset.

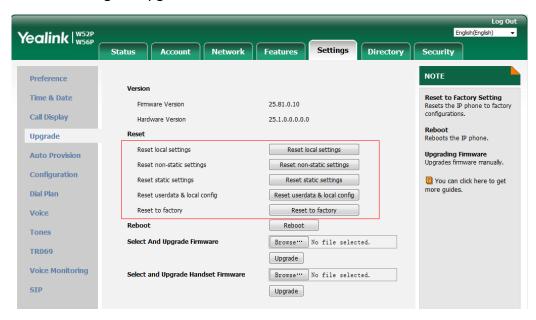

Reset static settings: All static configurations on the phone will be reset.

Reset userdata & local config: All the local cache data (e.g., userdata, history, directory) will be cleared.

Reset to factory: All configurations on the phone will be reset.

To clear personalized configuration settings via web user interface:

Click on Settings -> Upgrade.

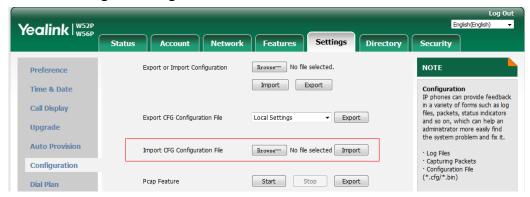

IV. Import CFG Configuration Files

Users can import CFG configuration files via web user interface and all the configuration will be taken effect on your IP phones. The imported configuration belongs to Local layer.

To import CFG configuration files via web user interface:

Click on Settings -> Configuration.

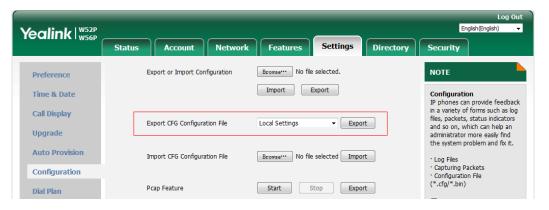

V. Export CFG Configuration Files

Users can export all the CFG configuration files via web user interface, including MAC-local.cfg, MAC-config.cfg, MAC-non-static.cfg, MAC-static.cfg and MAC-all.cfg.

To export CFG configuration files via web user interface:

Click on Settings -> Configuration.

VI. Flexible Auto Provision

The IP phone performs the auto provisioning process at a random time on a random day within a specific period of time. The random day is calculated on the basis of the phone's MAC address. You can specify an interval and configure what time of the day to trigger the IP phone to perform the auto provisioning process.

To configure this feature via web user interface:

Click on Settings -> Auto Provision

Yealink W52P				Log Out English(English) ✓

File Template for y00000000000.boot:

#!version:1.0.0.1

The header above must appear as-is in the first line

include:config <xxx.cfg>
include:config "xxx.cfg"

overwrite_mode = 1

The parameters in the auto provision template are described as follows:

static.auto_provision.flexible.enable =
static.auto_provision.flexible.interval =
static.auto_provision.flexible.begin_time =
static.auto_provision.flexible.end_time =
static.network.dhcp.option60type =
static.auto_provision.attempt_before_failed =
static.auto_provision.retry_delay_after_file_transfer_failed =
static.auto_provision.custom.sync.path =
static.auto_provision.server.type =

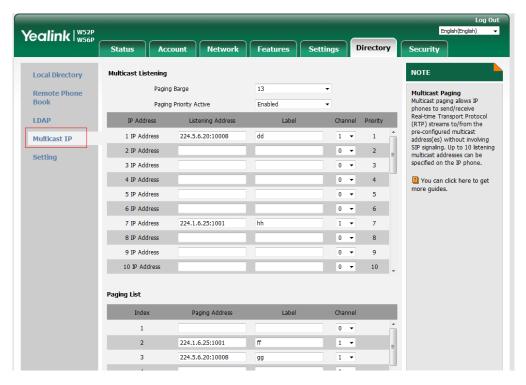

static.auto_provision.user_agent_mac.enable =
static.auto_provision.custom.protect =
static.auto_provision.custom.sync =
static.auto_provision.custom.upload_method =
For more information, please refer to
Yealink IP DECT Phone Administrator Guide V81 10

2. Added the feature of Multicast Paging.

Description: Multicast paging allows IP DECT phones to send/receive Real-time Transport Protocol (RTP) streams to/from the pre-configured multicast address(es) on the desired channel without involving SIP signaling. Up to 31 listening multicast addresses can be specified on the IP DECT phone.

To configure the multicast paging via web user interface:

Click on Directory -> Multicast IP.

The parameters in the auto provision template are described as follows:

multicast.codec =
multicast.paging_address.X.ip_address =
multicast.paging_address.X.label =
multicast.paging_address.X.channel =
multicast.listen_address.X.ip_address =
multicast.listen_address.X.label =

multicast.listen_address.X.channel =
multicast.listen_address.X.volume =
multicast.receive.use_speaker =
For more information, please refer to the
Yealink IP DECT Phone Administrator Guide V81 10

3. Added the feature of Emergency Dialplan.

Description: Emergency dialplan allows users to dial the emergency telephone number (emergency services number) at any time when the IP phone is powered on and has been connected to the network. It is available even if your phone keypad is locked or no SIP account has been registered.

The parameters in the auto provision template are described as follows:

```
dialplan.emergency.asserted_id_source =
dialplan.emergency.custom_asserted_id =
dialplan.emergency.server.x.address =
dialplan.emergency.server.x.port =
dialplan.emergency.server.x.transport_type =
dialplan.emergency.x.value =
dialplan.emergency.x.server_priority =
```

4. Added the feature that you can enable the IP DECT phone to encrypt <MAC>-local.cfg file using the plaintext AES key.

Description: When you enable this feature, the MAC-local CFG file is uploaded encrypted and replaces the one (encrypted or unencrypted) stored on the server if you have configured to back up the MAC-local CFG file to the server by the parameter "static.auto_provision.custom.sync". The plaintext AES key is configured by the parameter "static.auto_provision.aes_key_16.mac".

The parameters in the auto provision template are described as follows:

static.auto_provision.encryption.config =

5. Added the feature of Manual NAT (Static NAT) and ICE.

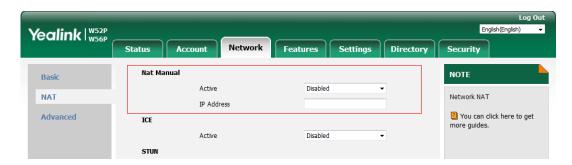

Description: Manual NAT helps IP connections traverse NAT gateways without the third-party network server (STUN/TURN server). If manual NAT feature is enabled, the configured public IP address and port can be carried in the SIP requests or RTP packets, in which the other party obtains the phone's public address. It is

useful to reduce the cost the company's network deployment. You can also enable the ICE feature via web user interface. In an ICE environment, two IP phones communicating at different locations are able to communicate via the SIP protocol by exchanging Session Description Protocol (SDP) messages.

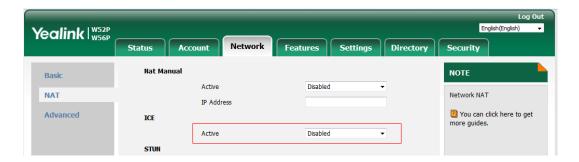

To configure manual NAT via web user interface:

Click on Network -> NAT

To configure ICE feature via web user interface:

Click on Network -> NAT

The parameters in the auto provision template are described as follows:

ice.enable =
sip.nat_turn.enable =
sip.nat_turn.server =
sip.nat_turn.password =
sip.nat_turn.port =

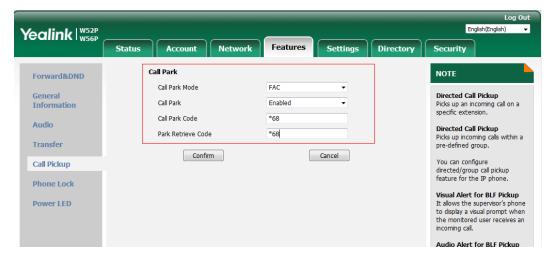

6. Added the feature of Call Park.

Description: Call park allows users to park a call on a special extension and then retrieve it from another phone (for example, a phone in another office or conference room). This feature depends on support from a SIP server. It is not applicable to W52H handset. Call park feature supports the following two modes: FAC mode and Transfer mode.

To configure call park feature via web user interface:

Click on Features -> Call Pickup

The parameters in the auto provision template are described as follows:

features.call_park.park_mode =
features.call_park.enable =
features.call_park.park_code =
features.call_park.park_retrieve_code =

7. Added the feature of Ringer Device for Headset.

Description: The IP DECT phones support speaker and headset ringer devices. The feature of Ringer Device for Headset allows users to configure which ringer device to be used when receiving an incoming call. For example, if the ringer device is set to Headset, ring tone will be played through the connected headset. If the headset is not connected, ring tone will be played through speaker.

The parameters in the auto provision template are described as follows:

features.ringer device.is use headset =

8. Added the feature of Number of Registered Handsets.

Description: Number of registered handsets allows you to configure the number of handsets registered to one base. Up to 5 handsets can be registered to one base. You can limit that how many handsets can be registered to one base station.

The parameters in the auto provision template are described as follows:

phone setting.max number of handset =

6. Optimization Descriptions

1. Optimized the feature of Upgrading Firmware.

Description: If you want to perform OTA upgrade via auto provisioning, you can use Handset trigger feature, which allows OTA upgrade for handset to be triggered automatically. It is only applicable when the current handset firmware is different with the one on provisioning server. When the handset is registered to a base or turned on successfully, handset trigger feature forces the handset fulfilling prerequisites to perform OTA upgrade.

The parameters in the auto provision template are described as follows:

```
over_the_air.url.w52h =
over the air.url.w56h =
```

2. Optimized the feature of Redirection and Provisioning Service (RPS).

Description: When you use Redirection and Provisioning Service (RPS), the phone will pop up an authentication window, allowing you to input the authentication information.

3. Optimized the feature of Network conference.

Description: You can configure the network conference type, Local Conference or Network Conference, manually.

The parameters in the auto provision template are described as follows:

```
account.X.conf type =
```

4. Optimized the feature of Audio Codec Configuration.

Description: Yealink IP phones running firmware version 81 or later support a new configuration behavior for the audio codecs. It is more efficiently for you to provision a number of different IP phone modules. The configuration parameters are different for the new configuration behavior and the older one.

For more information, please refer to the

Yealink IP DECT Phone Administrator Guide V81 10

The parameters in the auto provision template are described as follows:

```
account.X.codec.<payload_type>.enable =
account.X.codec. <payload_type>.priority =
account.X.codec. <payload_type>.rtpmap =
```

5. Optimized the feature of Time and Date.

Description: Added a new format of date string. For example, if you configure the format as "W,MD", then the handset will display the date in "Wed,0402".

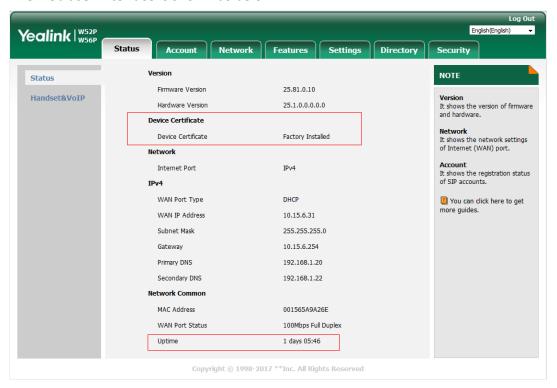

The parameters in the auto provision template are described as follows:

lcl.datetime.date.format =

6. Optimized the Status item in the web user interface.

Description: Added three items for Status in the web user interface: (1) Device Certificate; (2) Uptime: The duration from start-up to now.

The web user interface is shown as below:

The parameters in the auto provision template are described as follows:

features.display_method_on_dialing =

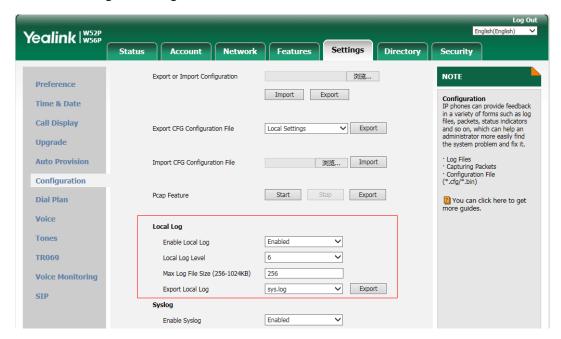

7. Optimized the feature of Viewing Log Files.

Description: In version 81, the log files are divided into local log files (including sys.log file and boot.log file) and syslog files. For the syslog files, (1) you can configure the transport type as UDP, TCP or TLS; (2) you can configure the facility that generates the log messages; (3) you can enable or disable the IP phone to prepend the MAC address to the log messages exported to the syslog server. In addition, you can also configure the IP phone to send syslog messages to a syslog server in real time.

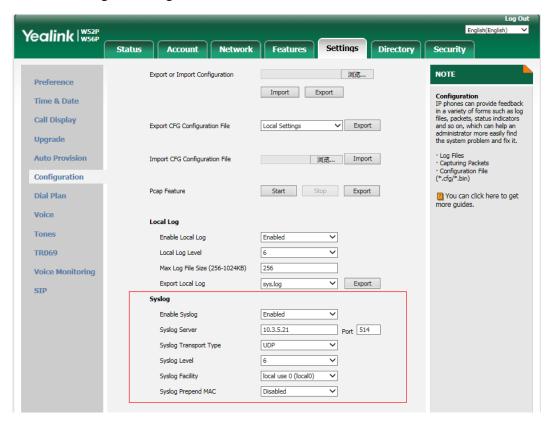

To export the system log to a local PC via web user interface:

Click on Settings -> Configuration

To configure the phone to export the system log to a syslog server via web user interface:

Click on Settings -> Configuration.

The parameters in the auto provision template are described as follows:

static.syslog.enable =

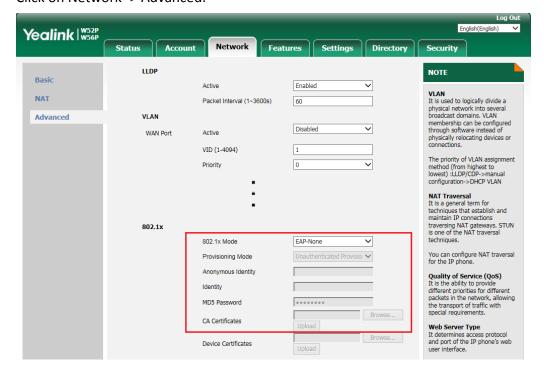

```
static.syslog.level =
static.syslog.transport_type =
static.syslog.prepend_mac_address.enable =
static.syslog.facility =
static.auto_provision.local_log.backup.enable =
static.auto_provision.local_log.backup.path =
static.auto_provision.local_log.backup.upload_period =
static.auto_provision.local_log.backup.append =
static.auto_provision.local_log.backup.append.limit_mode =
static.auto_provision.local_log.backup.append.max_file_size =
static.auto_provision.local_log.backup.bootlog.upload_wait_time =
```

8. Optimized the feature of 802.1X Authentication.

Description: (1) Added a mode of Anonymous Identity. (2) If you choose EAP-FAST as 802.1x Mode, you can choose Unauthenticated Provisioning as your Provisioning Mode. (3) You can specify the 802.1X authentication method, where EAP-NONE means no authentication in this new version, same as Disabled in the previous version.

To configure the 802.1X authentication via web user interface:

Click on Network -> Advanced.

9. Optimized the feature of Call Waiting.

Description: You can set the call waiting mode as Local or XSI. If the mode is configured as XSI, the call waiting status will be synchronized between the IP phone and the BroadWorks server.

The parameters in the auto provision template are described as follows: call_waiting.mode =

7. Configuration Parameters Enhancements

Auto Provision Template Flies Change Log										
Firmware Version: [25.80.193.10]-[25.81.193.10]										
	Provisioni Comparise		Permitted	Default						
Feature	25.80.19	25.81.193.1	Values	Value	Action	Description	File			
	3.10	0								
Features_ Audio Settings		features.ring er_device.is_ use_headset =	0 or 1	0	Add	It configures the ringer device for the IP DECT phone. 0-Use Speaker 1-Use Headset	common.			
Upgrade Method		over_the_air. url.w52h =	within 511 characters	Blank	Add	It configures the access URL of the W52H handset firmware file. Example: over_the_air.url.w52h = http://192.168.1.20/26.81.0 .1.rom Note: The priority of parameter "over_the_air.url.w52h" is higher than "over_the_air.url".	common.			
Upgrade Method		over_the_air. url.w56h =	within 511 characters	Blank	Add	Configures the access URL of the W56H handset firmware file. Example: over_the_air.url.w56h = http://192.168.1.20/61.80.0 .1.rom	common.			

	9 0111111		1	1	www.yealink.com	1
					Note: The priority of parameter "over_the_air.url.w56h" is higher than "over_the_air.url".	
Call Retriction	account.x.sim ultaneous_ou tgoing.num =	1, 2, 3 or 4	4	Add	It configures the number of simultaneous outgoing calls for account X on a base. Note: The IP DECT Phone supports up to 4 simultaneous calls.	MAC.cfg
Handset Restrictio n	phone_settin g.max_numb er_of_handse t =	1, 2, 3, 4 or 5	5	Add	It configures the number of handsets registered to one base.	common.
Time	Icl.datetime.d ate.format =	String	Blank	Add	It configures the format of date string. Y = year, M = month, D = day, W = day of week Value formats are: - Any combination of W, M, D and the separator (e.g., space, dash, slash). Example: Icl.datetime.date.format = W,MD The IP DECT phone will display the date in "W,MD" format (e.g., Wed,0420). - Any combination of Y, M, D, W and the separator (e.g., space, dash, slash). Example: Icl.datetime.date.format = YYYY-MMM-DDD-WWW The IP DECT phone will display the date in "YYYY-MMM-DDD-WWW" format (e.g., 2016-Apr-20-Wednesday). Note: "Y"/"YY" represents a	MAC.cfg

Yealink	
---------	--

				1		W W W.ycannk.com	
						two-digit year, more than	
						two "Y" letters (e.g., YYYY)	
						represent a four-digit year,	
						"M"/"MM" represents a	
						two-digit month, "MMM"	
						represents the abbreviation	
						of the month, three or more	
						than three "M" letters (e.g.,	
						MMM) represent the long	
						format of the month, one or	
						more than one "D" (e.g.,	
						DDD) represents a two-digit	
						day, "W"/"WW" represents	
						the abbreviation of the day	
						of week, three or more	
						three "W" letters (e.g.,	
						WWW) represent the long format of the day of week. It	
						works only if the value of	
						the parameter	
						"auto_provision.handset_co	
						nfigured.enable" is set to 1	
						(Enabled).	
						It enables or disables the IP	
						DECT phone to add a global prefix "+" to the E.164 user	
						parts in SIP: URI.	
						0-Disabled	
CID		sip.requesturi	0 1		A -1 -1	1-Enabled	common.
SIP		.e164.addglo	0 or 1	0	Add	If it is set to 1 (Enabled), the	cfg
		balprefix =				IP DECT phone will	
						automatically add a prefix	
						"+" to the number in the	
						E.164 format when you dial	
						using the SIP URI (e.g.,	
						862512345000@sip.com).	
						It configures the duration	
						time (in milliseconds) for	
Features_		features.dtmf	Integer from			each digit when a sequence	common.
DTMF		.duration =	0 to 300	100	Add	of DTMF tones is played out	cfg
			- 10 000			automatically.	2.0
						Note: If the time interval	
						between two DTMF digits is	
-	-		-	•			

Ye	a	lin	k

	 		ı	1	www.ycamik.com	
					less than this value, two or more same DTMF digits could be identified as one DTMF digit. This may cause the loss of one or more DTMF digits. For example, 2662 may be identified as 262. If so, you can modify the value of this parameter to a little lower than the default value.	
Features_ Audio Settings	features.call. dialtone_tim e_out =	Integer greater than or equal to 0	60	Add	It configures the duration time (in seconds) that a dial tone plays before a call is dropped. Example: features.call.dialtone_time_ out = 30 The IP phone will stop playing the dial tone in 30 seconds when on the dialing screen and return back to the idle screen. If it is set to 0, the call is not dropped.	common. cfg
Autop_Pr otect	static.auto_p rovision.cust om.protect =	0 or 1	0	Add	It enables or disables the IP DECT phone to protect personalized settings after auto provisioning. 0-Disabled 1-Enabled If it is set to 1 (Enabled), <mac>-local.cfg file generates and personalized non-static settings configured via web or handset user interface will be kept after auto provisioning. Note: The provisioning priority mechanism (handset/web user</mac>	common. cfg

					www.yealiiik.com	
					interface >central provisioning >factory defaults) takes effect only if the value of this parameter is set to 1 (Enabled). If the value of the parameter "overwrite_mode" is set to 1 in the boot file, the value of this parameter will be forced to set to 1 (Enabled).	
802.1X	static.networ k.802_1x.ano nymous_iden tity =	String within 512 characters	Blank	Add	It configures the anonymous identity (user name) for 802.1X authentication. It is used for constructing a secure tunnel for 802.1X authentication. Example: static.network.802_1x.anon ymous_identity = user@yealink.com Note: It works only if the value of the parameter "static.network.802_1x.mod e" is set to 2, 3, 4, 5, 6 or 7.	common. cfg
802.1X	static.networ k.802_1x.eap _fast_provisi on_mode =	0 or 1	0	Add	It configures the EAP In-Band provisioning method for EAP-FAST. O-Unauthenticated Provisioning 1-Authenticated Provisioning If it is set to 0 (Unauthenticated Provisioning), EAP In-Band provisioning is enabled by server unauthenticated PAC (Protected Access Credential) provisioning using anonymous Diffie-Hellman key exchange. If it is set to 1	common. cfg

	10			_	1	www.yealink.com	<u> </u>
						(Authenticated Provisioning), EAP In-Band provisioning is enabled by server authenticated PAC provisioning using certificate based server authentication. Note: It works only if the value of the parameter "static.network.802_1x.mod e" is set to 7 (EAP-FAST).	
Syslog		static.local_lo g.enable =	0 or 1	1	Add	It enables or disables the IP DECT phone to record log locally. 0-Disabled 1-Enabled If it is set to 0 (Disabled), the IP DECT phone will stop recording log to the log files (<mac>-boot.log and <mac>-sys.log) locally. The log files recorded before are still kept on the phone. If it is set to 1 (Enabled), the IP DECT phone will continue to record log to the log files (<mac>-boot.log and <mac>-sys.log) locally. You can export the local log files to the provisioning server or a specific server or the local system. Note: We recommend you not to disable this feature.</mac></mac></mac></mac>	common. cfg
Syslog		static.local_lo g.level =	Integer from 0 to 6	3	Add	It configures the lowest level of local log information to be rendered to the <mac>-sys.log file. When you choose a log level, you are including all events of an equal or higher severity level and excluding events of a lower severity</mac>	common. cfg

			1		www.yealink.com	,
					level. The logging level you choose determines the lowest severity of events to log. O-system is unusable 1-action must be taken immediately 2-critical condition 3-error conditions 4-warning conditions 5-normal but significant condition 6-informational	
Syslog	static.local_lo g.max_file_si ze =	Integer from 256 to 1024	256	Add	It configures the maximum size (in KB) of the log files (<mac>-boot.log and <mac>-sys.log) can be stored on the IP DECT phone. When this size is about to be exceeded, (1) If the local log files are configured to be uploaded to the server by the parameter "static.auto_provision.local_log.backup.enable", the IP DECT phone will clear all the local log files on the phone once successfully backing up. (2) If the value of the parameter "static.auto_provision.local_log.backup.enable" is set to 0 (Disabled), the IP DECT phone will erase half of the logs from the oldest log information on the phone. Example: static.local_log.max_file_siz</mac></mac>	common. cfg

					- 4024	
					e = 1024	
Syslog	static.syslog.e nable =	0 or 1	0	Add	It enables or disables the IP DECT phone to upload log messages to the syslog server in real time. 0-Disabled 1-Enabled	common.
Syslog	static.syslog.l evel =	Integer from 0 to 6	3	Add	It configures the lowest level of syslog information that displays in the syslog. When you choose a log level, you are including all events of an equal or higher severity level and excluding events of a lower severity level. The logging level you choose determines the lowest severity of events to log. O-Emergency: system is unusable 1-Alert: action must be taken immediately 2-Critical: critical conditions 3-Critical: error conditions 4-Warning: warning conditions 5-Warning: normal but significant condition 6-Informational: informational messages	common. cfg
Syslog	static.syslog.t ransport_typ e =	0, 1 or 2	0	Add	It configures the transport protocol that the IP DECT phone uses when exporting log messages to the syslog server. 0-UDP 1-TCP 2-TLS	common.
Syslog	static.syslog.	0 or 1	0	Add	It enables or disables the IP	common.

					in progress. If it is not set to 0(Disabled), the IP DECT phone will receive the incoming multicast paging call with a higher or same priority than this value and ignore that with a lower priority than this value when a voice call is in progress.	
Multicast	multicast.list en_address.X .channel =	Integer from 0 to 30	0	Add	It configures the channel that the IP DECT phone listens to. If it is set to 0, the IP DECT phone can receive an RTP stream of the pre-configured multicast address from the IP DECT phones running firmware version 80 or prior, from the IP DECT phones listen to the channel 0, or from the available third-party devices (e.g., Cisco IP phones). If it is set to 1 to 25, the IP phone can receive an RTP stream of the pre-configured multicast address on the channel 1 to 25 respectively from Yealink or Polycom IP DECT phones. It is set to 26 to 30, the IP phone can receive the RTP stream of the pre-configured multicast address on the channel 26 to 30 respectively from Yealink IP DECT phones. Example: multicast.listen_address.1.c hannel = 2	common. cfg
Multicast	multicast.list	String within	Blank	Add	It configures the label to be	common.

			1	1	www.yealifik.com	
	en_address.X .label =	99 characters			displayed on the LCD screen when receiving the multicast paging calls. Example: multicast.listen_address.1.la bel = Paging1	cfg
Multicast	multicast.list en_address.X .ip_address =	IP address: port	Blank	Add	It configures the multicast address and port number that the IP phone listens to. Example: multicast.listen_address.1.ip _address = 224.5.6.20:10008 Note: The valid multicast IP addresses range from 224.0.0.0 to 239.255.255.255.	common. cfg
Multicast	multicast.pag ing_address. X.channel =	Integer from 0 to 30	0	Add	It configures the channel of the multicast paging group in the paging list. If it is set to 0, all the Yealink IP DECT phones running firmware version 80 or prior or Yealink IP DECT phones listens to channel 0 or third-party available devices (e.g., Cisco IP phones) in the paging group can receive the RTP stream. If it is set to 1 to 25, the Polycom or Yealink IP DECT phones preconfigured to listen to the channel can receive the RTP stream. It is set to 26 to 30, the Yealink IP DECT phones preconfigured to listen to the channel can receive the RTP stream. Example: multicast.paging_address.1.	common. cfg

				i	www.yeaiiik.com	1
					channel = 3 multicast.paging_address.2. channel = 5	
Multicast	multicast.pag ing_address. X.ip_address =	String	Blank	Add	It configures the IP address and port number of the multicast paging group in the paging list. It will be displayed on the LCD screen when placing the multicast paging call. Example: multicast.paging_address.1.i p_address = 224.5.6.20:10008 multicast.paging_address.2.i p_address = 224.1.6.25:1001 Note: The valid multicast IP addresses range from 224.0.0.0 to 239.255.255.255.	common. cfg
Multicast	multicast.list en_address.X .label =	String	Blank	Add	It configures the IP address and port number of the multicast paging group in the paging list. It will be displayed on the LCD screen when placing the multicast paging call. Example: multicast.paging_address.1.i p_address = 224.5.6.20:10008 multicast.paging_address.2.i p_address = 224.1.6.25:1001 Note: The valid multicast IP addresses range from 224.0.0.0 to 239.255.255.255.	common. cfg
Multicast	multicast.cod ec =	PCMU, PCMA,	G722	Add	It configures the codec for multicast paging.	common.

	 				W W W.ycannk.com	
		G729,			Example:	
		G722			multicast.codec = G722	
Emergenc y Dialplan	dialplan.emer gency.asserte d_id_source =	ELIN or CUSTOM	ELIN	Add	It configures the precedence of source of emergency outbound identities when placing an emergency call. If it is set to ELIN, the outbound identity used in the P-Asserted-Identity (PAI) header of the SIP INVITE request is taken from the network using an LLDP-MED Emergency Location Identifier Number (ELIN). The custom outbound identity configured by "dialplan.emergency.custom _asserted_id" will be used if the phone fails to get the LLDP-MED ELIN value. If it is set to CUSTOM, the custom outbound identity configured by "dialplan.emergency.custom _asserted_id" will be used; if the value of the parameter "dialplan.emergency.custom _asserted_id" is left blank, the LLDP-MED ELIN value will be used. Note: If the obtained ELIN value will be used. Note: If the obtained ELIN value is blank and no custom outbound identity, the PAI header will not be included in the SIP INVITE request.	common. cfg
Emergenc y Dialplan	dialplan.emer gency.custom _asserted_id =	10-25 digits, SIP URI, or TEL URI	Blank	Add	It configures the custom outbound identity when placing an emergency call. If using a TEL URI, for example, tel:+16045558000. The full URI is included in	common. cfg

Yealink

				•	www.yealifik.com	
					the P-Asserted-Identity (PAI) header (e.g.,	
Emergenc y Dialplan	dialplan.emer gency.server. X.address = (X ranges from 1 to 3)	IP address or domain name	Blank	Add	It configures the IP address or domain name of the emergency server X to be used for routing calls. Note: If the account is registered successfully or failed (the account information has been configured), the emergency calls will be dialed using the following priority: SIP server>emergency server; if the account is not registered, the emergency server will be used.	common. cfg
Emergenc y Dialplan	dialplan.emer gency.server. X.port = (X ranges from 1 to 3)	Integer from 1 to 65535	5060	Add	It configures the port of emergency server X to be used for routing calls.	common. cfg
